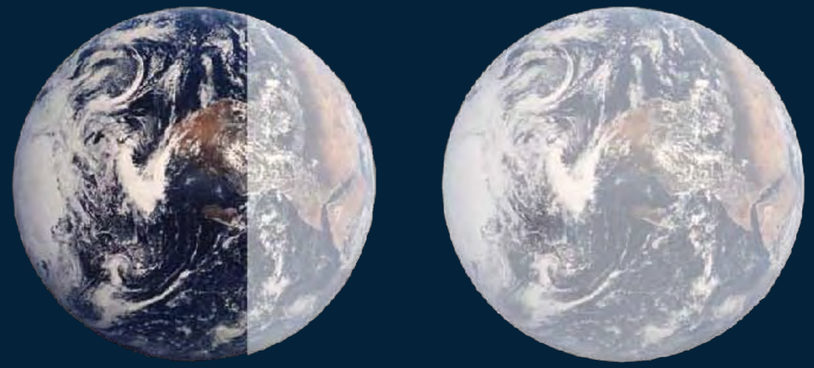
Planning for green and social infrastructure Aarhus H

Cobe / Dan Stubbergaard

August 2, 2019 was the Earth Overshoot Day - the day when the entire year's sustainable consumption of natural resources is exhausted five months ahead.



17,5 %

Is the share of total greenhouse gas emissions from transportation and mobility in the worlds greater urban areas.

How can green mobility become a gamechanger in organizing our urban environments?

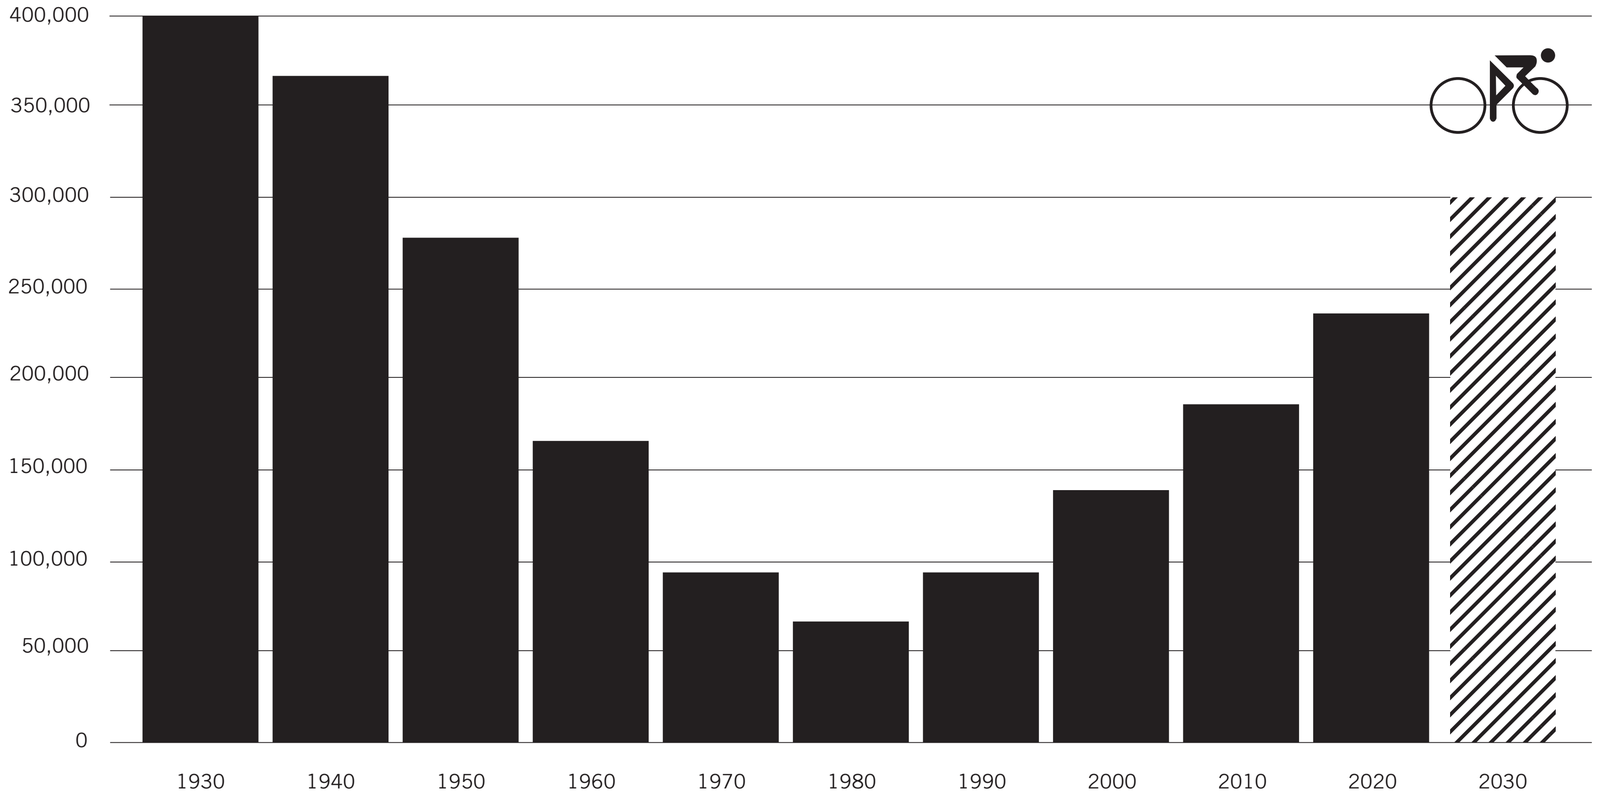
From Infrastructure to Public Space

Why does infrastructure dictate the vast majority of public spaces in our cities?

Bicycle traffic in Copenhagen 1930–2030



Biking
For an extraordinary everyday

40 % off all citizens in Copenhagen
commute by bike.

Copenhagen bicycle bridges

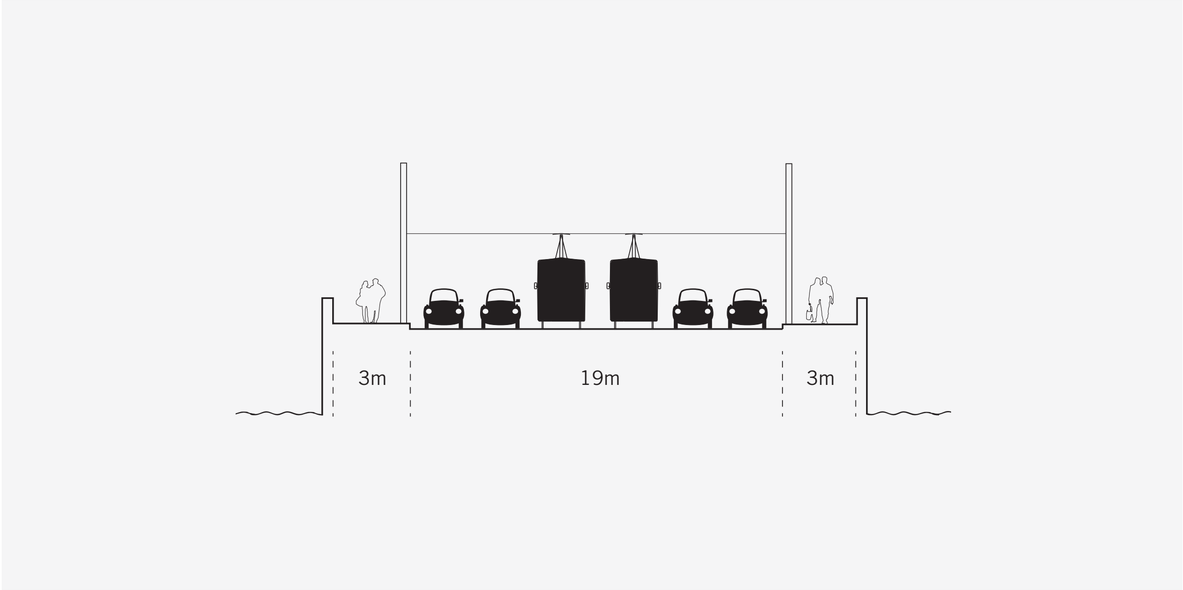
The battlefield of the Copenhagen streets and the creation of a bicycle city

1940s: Copenhagen was a city of cyclists with up to 400,000 people riding their bikes in and out of the centre every day.

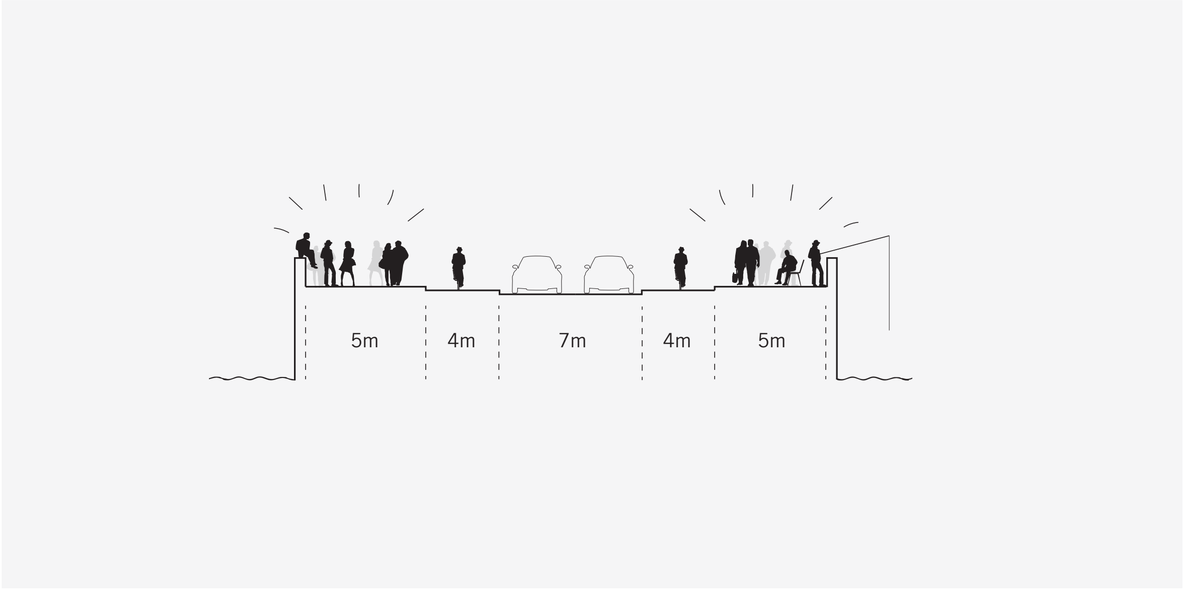
1960s: As a result of the suburbanization of the 60s, cars took over as the main mode of transportation. Bicycle lanes were cancelled to make room for car parks.

1980s: The bicycle lanes were reclaimed in the streets, once again separating the bicycles from cars. This marks the beginning of Copenhagen's second bicycle era.

Dronning Louises Bro:
From car congested street to bicycle paradise



Dronning Louises Bro, 1980s



Dronning Louises Bro today

In the 1970s and 1980s, Dronning Louises Bro was a heavily congested street dominated by cars and trams.

Nørreport

Public infrastructure is public space!

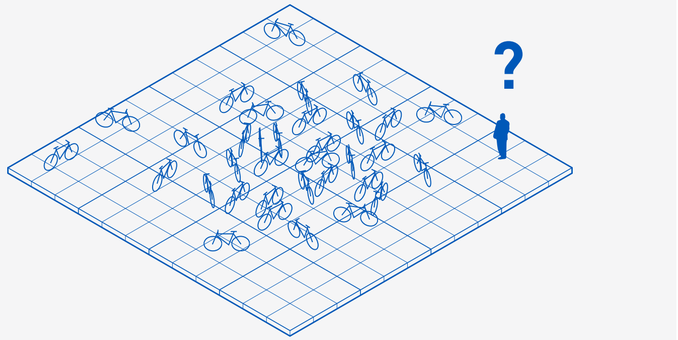
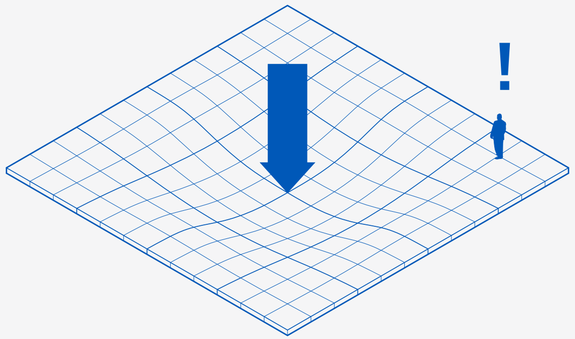
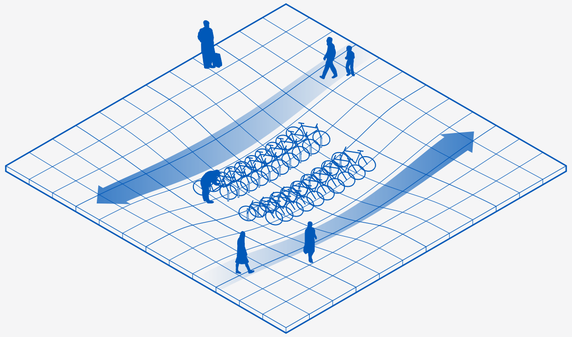
A new bicycle order







Lagoon:

2500 bicycles circular set-up
– tube circles.

265 bicycles
325 square metres, 1.2
square metres per bicycle.

293 bicycles
327 square metres,
1.1 square metres per bicycle.

Lagoon depth: 0.5 metre.

2568 bicycles circular set-up
1368 – perpendicular
1200 – mixed

293 bicycles
327 square metres.
1.1 square metres per bicycle.

Tilt and steps:

2500 bicycles, circular set-up
– peak islands

230 bicycles
327 square metres,
1.4 square metres per
bicycle.

290 bicycles
327 square metres
1.2 square metres per bicycle.

Ramp depth: 0.2m

180 bicycles
211 square metres,
1.3 square metres per bicycle.

Ramp:

Variation: short and steeper ramp.
Depth: 0.2 metre.

2432 bicycles, perpendicular
– tube strap.

170 bicycles
211 square metres, 1.2
square metres per bicy-
cle.

180 bicycles
211 square metres,
1.3 square metres per bicycle.

2503 bicycles,
angular set-up – row.

201 bicycles
296 square metres,
1.3 square metres per bicycle.

A good city is like a good party - people stay longer than really necessary, because they are enjoying themselves.

Jan gehl
